
**Libraries in Higher Education –
PROF. SADAGOPAN**

Abstract

Digital libraries started with electronic journals; over a period of time many other materials that include class notes, student projects, book reviews, paper reviews, annotated bibliography, and webliogrpahy (web-links in the form of bibliography) have been included. E-books are evolving independently. There are also specialized collections for particular areas such as computer science & medicine. In this presentation we will take stock of these independent developments, challenges in their integration, particularly from a developing country perspective with limited access to computing resources.
